

Course Code	TKIE161203	
Course Name	Linear Algebra	
Course Instructors	Adha Imam Cahyadi; D. Dony Ariananda	
Course Type	Required	
Course Classification	Basic Science & Math	
Credit / Contact Hour per Week	3 / 150 minutes per Week	
Course Description	This course discusses vector and matrix theory, its role as presentations of geometry, and how this theory can be used to solve mathematical model. The mathematical model can generally be formulated based on some engineering problems.	
Prerequisites Courses	-	
Covered Student Outcome	Fundamental and Engineering Knowledge (a) Development of Engineering Solution (b)	
No	Learning Outcome	Student Outcome SO (a) – SO (k)
1	Students are able to explain the concept of vectors and matrices as well as matrices operation, able to solve mathematical problems involving vectors and matrices, and able to interpret this concept from geometrical perspective.	Fundamental and Engineering Knowledge (a)
2	Students are able to explain the relationship between the process of solving linear equations with matrix elimination (Gauss elimination, Gauss-Jordan elimination, and LU factorization) and able to solve systems of linear equations using the aforementioned elimination methods.	Fundamental and Engineering Knowledge (a)
3	Students are able to explain the concepts of vector spaces and subspaces, able to interpret this concepts from the geometrical perspective, and able to apply this intuition from the geometrical perspective to solve related problems.	Fundamental and Engineering Knowledge (a)
4	Students are able to explain the concepts of orthogonality and projection as well as able to solve the problems of projecting a vector into a particular subspaces by exploiting both least-square and Gram-Schmidt methods.	Development of Engineering Solution (b)
5	Students are able to explain the property of the determinant of a matrix, able to explain how to compute the determinat of a matrix, able to apply determinant to solve invers problems and system of linear equations.	Fundamental and Engineering Knowledge (a)
6	Students are able to explain the concepts of eigenvalues, eigenvectors, and singular value decompositions (SVD), able to explain how to compute eigenvalue decomposition of a square matrix and the SVD of a matrix.	Fundamental and Engineering Knowledge (a)
Topic	<ol style="list-style-type: none"> 1. Introduction to Vectors and Matrices, Dot and Cross Products 2. Solving System of Linear Equations 3. Gauss Elimination, Gauss-Jordan Elimination, LU Factorization 4. Vector Spaces and Subspaces. 5. The four important subspaces and their relationship to system of linear equations 6. The rank of a matrix, the concepts of basis and dimenions, and their relationship with the column space and row space. 7. Orthogonality and Projections 8. Gram Schmidt and QR Factorization 9. Least Squares Approximation 	

	10. The Concept of Determinants 11. Eigenvalues, Eigenvectors, Diagonalization and Eigenvalue Decomposition. 12. Symmetric Matrices, Positive (Semi) Definite Matrices, and Orthogonal Diagonalization 13. Singular Value Decomposition																					
Direct Assessment	<table border="1"> <thead> <tr> <th>Direct Assessment Plan</th> <th>Measured Learning Outcome</th> </tr> </thead> <tbody> <tr> <td>Homework 1</td> <td>LO1</td> </tr> <tr> <td>Homework 2</td> <td>LO2</td> </tr> <tr> <td>Homework 3</td> <td>LO3</td> </tr> <tr> <td>Homework 4</td> <td>LO4</td> </tr> <tr> <td>Homework 5</td> <td>LO5</td> </tr> <tr> <td>Homework 6</td> <td>LO6</td> </tr> <tr> <td>Mid Exam</td> <td>LO1, LO2, LO3</td> </tr> <tr> <td>Final Exam</td> <td>LO4, LO5, LO6</td> </tr> <tr> <td></td> <td></td> </tr> </tbody> </table>		Direct Assessment Plan	Measured Learning Outcome	Homework 1	LO1	Homework 2	LO2	Homework 3	LO3	Homework 4	LO4	Homework 5	LO5	Homework 6	LO6	Mid Exam	LO1, LO2, LO3	Final Exam	LO4, LO5, LO6		
Direct Assessment Plan	Measured Learning Outcome																					
Homework 1	LO1																					
Homework 2	LO2																					
Homework 3	LO3																					
Homework 4	LO4																					
Homework 5	LO5																					
Homework 6	LO6																					
Mid Exam	LO1, LO2, LO3																					
Final Exam	LO4, LO5, LO6																					
Indirect Assessment	Questionnaire (EDOM)
